# Drewsperse<sup>™</sup> 747A deposit control agent

## **Product Description**

Drewsperse<sup>™</sup> 747A deposit control agent is a concentrated polymer for the prevention of waterborne scale and sludge. It will prevent the formation of calcium carbonate and calcium sulfate in cooling water systems. It is especially effective in retort water, washing spray, and cooling water for canned products.

### **Product Application**

Drewsperse 747A should be metered continuously into the affected system as delivered or as a dilute solution. Corrosion resistant equipment should be used when feeding Drewsperse 747A.

#### **Feeding and Control**

The exact amount of product for any given application will depend upon a number of factors including: the nature and extent of the fouling, the type of system being treated and the degree of control required. Where necessary, your Solenis representative will arrange for chemical analyses and offer technical advice concerning specific site problems.

## **Packaging**

This product is available in a variety of packaging sizes. Your Solenis representative will recommend the appropriate packaging for the application.

#### **Important Information**

**Typical Properties:** Refer to the Safety Data Sheet (SDS).

**Regulatory Information:** Refer to the SDS or contact your sales representative for any additional regulatory and environmental information.

**Safety:** Solenis maintains an SDS for all of its products. Use the health and safety information contained in the SDS to develop appropriate product handling procedures to protect your employees and customers.

Our SDS should be read and understood by all of your supervisory personnel and employees before using Solenis products in your facilities.
